## EDUCATION

### Bachelor of Technology in Electrical Engineering

Indian Institute of Technology, Roorkee

2020-24

### Intermediate

Jawahar Navodaya Vidyalaya, Udham Singh Nagar

2018-19

## TECHNICAL SKILLS

- **Programming:** C++, JavaScript, TypeScript, OOPs, DSA.
- **Web Development:** ReactJS, NodeJS, ExpressJS, MongoDB, HTML, CSS, Bootstrap, RestAPI, Twilio.
- **Tools:** BlandAI, VAPI, SEO.

## WORK EXPERIENCE

### Full Stack Developer, Autocash

March 2025 - Present

- Optimized application performance by significantly reducing the React bundle size, resulting in faster load times and improved user experience.
- Automated the ingestion of MT940 files from AWS S3 to the Autocash platform using Windmill Flows, reducing manual intervention by 70% and streamlining financial data processing.

### Software Engineer, Better Software

July 2024 - Feb 2025

- Responsible for developing new websites, adding features to existing sites, and optimizing **SEO**.
- Worked on multiple projects across the company, primarily focusing on "**Sunlead**," an AI-powered solar quotation tool estimating costs and savings for solar installations in US residential houses.
- Utilized **VAPI** and **BlandAI** in projects to streamline user interactions and enhance functionality through AI-driven solutions.
- **Tech stack** - ReactJS, MongoDB, ExpressJS, NodeJS, TypeScript, JavaScript, tsx, jsx, BlandAI, VAPI.

## PROJECTS

### Sunlead, Better Software

Aug 2024- Present

- Built a feature to visualize rooftop solar panels using the Google Solar API and react-leaflet, rendering accurate panel layouts with the Polygon component. Improved the accuracy of quotation tool using google solar API.
- Integrated VAPI, an AI assistant, into the frontend to facilitate user interaction and data collection. Designed and implemented RESTful CRUD APIs to enable seamless communication between the AI assistant and the backend server.
- Enabled VAPI to guide users through proposal reviews and appointment scheduling. Integrated Twilio for automated SMS notifications. Wrote automated test cases to ensure reliable API functionality

### Development of experiments in Virtual Lab, IIT Roorkee

Sep 2023 - April 2024

- Developed virtual electrical instrumentation experiments for a B.Tech project using ReactJS, Syncfusion for circuit drawing and ChartJS, d3 for data visualization.

### ANN based Predictive Model for Bevel-Tip Needle Deflection, IIT Roorkee

Aug 2022- Dec 2022

- Developed a neural network model to predict the deflection of a needle during its insertion into liver tissue.
- Utilized MLP modeling to enhance the accuracy of the ANN model.
- Reduced the error rate to 3%, compared to 13% reported in existing research.

## EXTRA CURRICULAR

- **Competitive Programming:** Pupil on codeforces(1239) and solved 400+ problems across various coding platforms like gfg, leetcode.
- **NSS IITR:** Lead a team of 50+ students and organized various events like Blood Donation Camp, Road Safety Month and many more.
- **Publication:** Published research paper focused on forecasting the deflection of a brachytherapy needle with an asymmetric tip during insertion into phantom tissue, utilizing a neural network-based approach. [Link](#)
